The prize list would be figured on the percentages corresponding to the number of entries. For example, if 28 teams entered the tournament, six places would be paid. If the total prize money paid into the event was \$135, the first place team would receive \$32.40 (\$135 times 24% equals \$32.40). The sixth place team would receive \$14.85 (\$135 times 11% equals \$14.85). Last place must be at least equal to the individual prize fee unless otherwise provided by tournament rules. Figures can, of course, be rounded off to the nearest dollar.
